

Guilherme Camarada

Portugal | guilhermecamarada.dev@gmail.com | guilherme-camarada.github.io | github.com/Guilherme-Camarada

Skills

Development: C#, ASP.NET, Angular, Typescript, Unity, Java, HTML, CSS, REST API

Data: MySQL, MSSQL, MongoDB

Developer Tools: Git, Jira, Confluence

Experience

Game Developer, Overflow Interactive – Setúbal, Portugal

July 2025 – October 2025

- Engineered a 3D physics-based dice throw system utilizing Unity Rigidbody and event-driven architecture to effectively decouple game logic from animation.
- Implemented a custom A* pathfinding algorithm on hexagonal grids using heuristic formulas to facilitate dynamic obstacle avoidance and complex village-raiding AI.
- Developed a procedural map generation module leveraging Perlin noise and axial coordinates to dynamically construct distinct biomes and automatically place structures.
- Designed a scalable reward system using Scriptable Objects and the Strategy pattern, empowering game designers to seamlessly iterate content independently of source code.
- Architected modular gameplay systems by adhering to SOLID principles and Clean Code standards to decouple dependencies and ensure long-term technical maintainability.
- Collaborated within a ScrumBan agile environment using sprint cycles and centralized Confluence documentation to guarantee continuous delivery and high code quality.

Projects

Cyber Gauntlet – *A roguelike arena shooter game* C#, Unity | github.com/Guilherme-Camarada/Soulslike_FPS_Shooter

- Designed a highly modular upgrade system supporting real-time runtime alterations to enable dynamic gameplay customization and scalable feature expansion.
- Developed procedural animation systems for various enemies and weapons to deliver highly responsive visual feedback and fluid combat interactions.
- Engineered a responsive First-Person Shooter controller tailored for fast-paced arena gameplay to ensure precise movement and intuitive aiming mechanics.

Death To T'Zoma – *A horror escape room game*

C#, Unity | tetaban.itch.io/deathtotheking

- Engineered an interactive translation book system featuring dynamic word generation and text-selection mechanics to power the core ritual-solving puzzle gameplay.
- Led the programming team by orchestrating task distribution and streamlining technical communication to ensure cohesive development and continuous project alignment.
- Architected a dynamic clue-spawning framework to intelligently distribute puzzle elements and guarantee a balanced discovery pace across the decaying room environment.

Education

Instituto Politécnico de Setúbal (Final Grade: 15/20) – BS in Software Engineering

June 2026
